

SUJAL KUMAR

Gurugram, India | +91-6207210784 | sujalreal983@gmail.com

Portfolio: sujal.rocks | GitHub: github.com/Sujal12345-pheoniix | LinkedIn: linkedin.com/in/sujal-kumar-95b723291

PROFESSIONAL SUMMARY

Software Engineer focused on building database-driven web applications and robust backend services. Experienced in designing REST APIs, implementing Role-Based Access Control (RBAC), and managing complex authentication workflows using TypeScript, Node.js, NestJS, and PostgreSQL. Committed to writing maintainable code and improving data persistence logic in multi-user business systems.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Python, SQL

Backend: Node.js, NestJS, FastAPI, REST APIs, JWT Authentication, WebSockets

Frontend: React.js, Next.js, Tailwind CSS

Databases: PostgreSQL, Prisma ORM, Redis

Tools: Git, GitHub Actions, CI/CD, Docker, Linux, Vercel, Render

EXPERIENCE

Kenzo Pvt. Ltd. | Software Developer | July 2026 – Present

- Designed and developed modular internal business applications, including an expense management system and HR modules, using NestJS and TypeScript.
- Implemented Role-Based Access Control (RBAC) to enforce security and data isolation between administrative and employee users.
- Refactored legacy application logic, migrating data persistence from client-side browser storage to server-side PostgreSQL to ensure data integrity and cross-device consistency.
- Developed backend API services to integrate core business logic with frontend dashboards, handling document uploads and state management for user workflows.

Startup Product Development | Software Engineer | Jan 2026 – June 2026

- Built backend services for SaaS application modules, focusing on clean separation of concerns and efficient data modeling.
- Designed relational database schemas for multi-user business workflows, ensuring high data integrity.
- Supported application deployment workflows, utilizing CI/CD pipelines to standardize development and production releases.

CodSoft | Full Stack Developer Intern | May 2025 – July 2025

- Contributed to the frontend and backend development of web applications, improving API request handling and component-based state management.
- Automated deployment workflows using GitHub Actions.

PROJECTS

Expense Tracker | Next.js, NestJS, PostgreSQL, Prisma | [Live Site](#)

- Built an internal expense management system to digitize claim submissions, bill attachments, and administrative approval chains.
- Engineered RBAC logic to define authorization boundaries between employee-level submissions and admin-level approval workflows.
- Designed a dynamic dashboard architecture for itemized tracking of business expenses and organization-level financial data.

HRMS | Next.js, NestJS, PostgreSQL, Prisma, RBAC | [Live Site](#)

- Developed a modular HR management system for tracking employee lifecycles, departmental mappings, and leave requests.
- Implemented server-side state management for attendance and leave workflows, replacing client-side tracking with centralized database records.
- Designed secure API endpoints to manage sensitive employee data access based on user role and department permissions.

Digital Adoption Platform | React, Node.js, PostgreSQL | [Live Site](#)

- Developed a system for injecting contextual user guidance (walkthroughs) into web applications.

- Engineered database schemas to manage project-specific configurations, user progress tracking, and contextual triggers.
- Built analytics tracking for user events, allowing for observation of user behavior during onboarding flows.

OneERP | FastAPI, Python, PostgreSQL, Redis | [Live Site](#)

- Designed a unified business management platform with modules for finance and inventory data.
- Implemented Redis caching to optimize data retrieval speeds for frequently accessed business records.
- Integrated RAG-ready pipelines for querying structured business data via natural language.

TruthBomb (AI Verification) | FastAPI, PostgreSQL, Redis, RAG | [Live Site](#)

- Implemented a Retrieval-Augmented Generation (RAG) pipeline to coordinate AI-assisted fact verification.
- Designed API endpoints to manage verification requests across multiple AI models.
- Optimized data verification workflows by implementing a Redis caching layer to store and retrieve recent query results.

EDUCATION

St. Andrews Institute of Technology and Management | B.Tech, Computer Science and Technology | **2023 – 2027**

ACHIEVEMENTS & CERTIFICATIONS

- Solved 100+ Data Structures and Algorithms problems on LeetCode.
- Contributed to the development of complex enterprise applications across HRMS, ERP, Expense Management, and Digital Adoption Platform (DAP) domains.
- Demonstrated proficiency in full-stack development, REST APIs, PostgreSQL, authentication, RBAC, database-backed workflows, and multi-user system architecture.
- Certifications: Google Data Analytics, Microsoft AI Fundamentals, Microsoft Data Analytics, IBM SkillsBuild.
